Ayon Mercury II

The Mercury II continues the evolution of the Mercury amplifier by once again offering dramatic improvements to its completely revised second-generation power supply and driver technology. The Ayon Mercury II is the little brother of our famous "Crossfire" amplifier. It exhibits all well known Ayon magic and qualities. This amplifier offers exceptional tonal neutrality, high resolution and punchy-airy timbre with great musical sweetness. A quick uncoloured bass and a spacious 3D soundstage are self-evident for this remarkable amp. Three different Triode Power tubes can be used in this amplifier. A technical update is necessary, which can be installed by the distributor. The advantage for the customer is to tune up into the next power class using the same amplifier.
