Ayon AURIS "Reference" preamp

After the success of the "smaller" Ayon preamplifiers many customers approached us wishing a modular and upgradeable concept. The new Auris is such a modular tube pre-amp design and is offered in some varieties: unbalanced or fully balanced, signature version and Phono MC/MM option for all varieties.

This "Reference" preamp represents the highest standard of preamp based on 6H30 design achievement and offers a holographic soundstage previously unavailable at this price class. The performance of the Auris is outstanding, transparent and vivid in its presentation. There is a huge space of the recording environment reproduced with uncanny realism. The purist 6H30 circuit topology is using zero dB negative feedback, no buffers and no followers or op amps are used anywhere in the signal path. Excellence in engineering, a special tube rectified power supply and super premium components selection provides a special magic to the reproduction of music.
