Ayon BlackEye

For the BlackEye spatial imaging and lively reproduction were considered very important. The mid-/high range sounds extraordinarily powerful and rich in details without any trace of acuity. Tube aficionados will be excited about the high efficiency of 95dB that is very exceptional for a non-horn speaker. The dynamic is very expressive; the bass plays with extreme lightness, fast, punchy and dry. Low coloration combined with a breeze of a “darker” timbre, excellent linearity and phenomenal speed are the final result of this speaker. The high efficiency, uncompromisingly crossover circuit and well balanced impedance curve are also ideal for low powered single-ended tube amplifiers. Perfect finish and elegant timeless design complete the BlackEye and is simply not available elsewhere at its price level.
